

1 Redesign direction + wiremocks

Moving off dark-navy/violet — that palette now reads “AI side project.” The proposal is warm paper, near-black ink, one vermilion signal colour, and a serif display face: closer to a modern audio/editorial product than a dev tool. Dark is kept, but only where it earns its place — the listening surfaces. Working name **Earshot** is a placeholder to show the wordmark working; say the word and I’ll swap it back.

1a Identity & foundations — palette, type, and a button hierarchy that reads

1b Mobile — first run through first listen

Shared episode (public link)

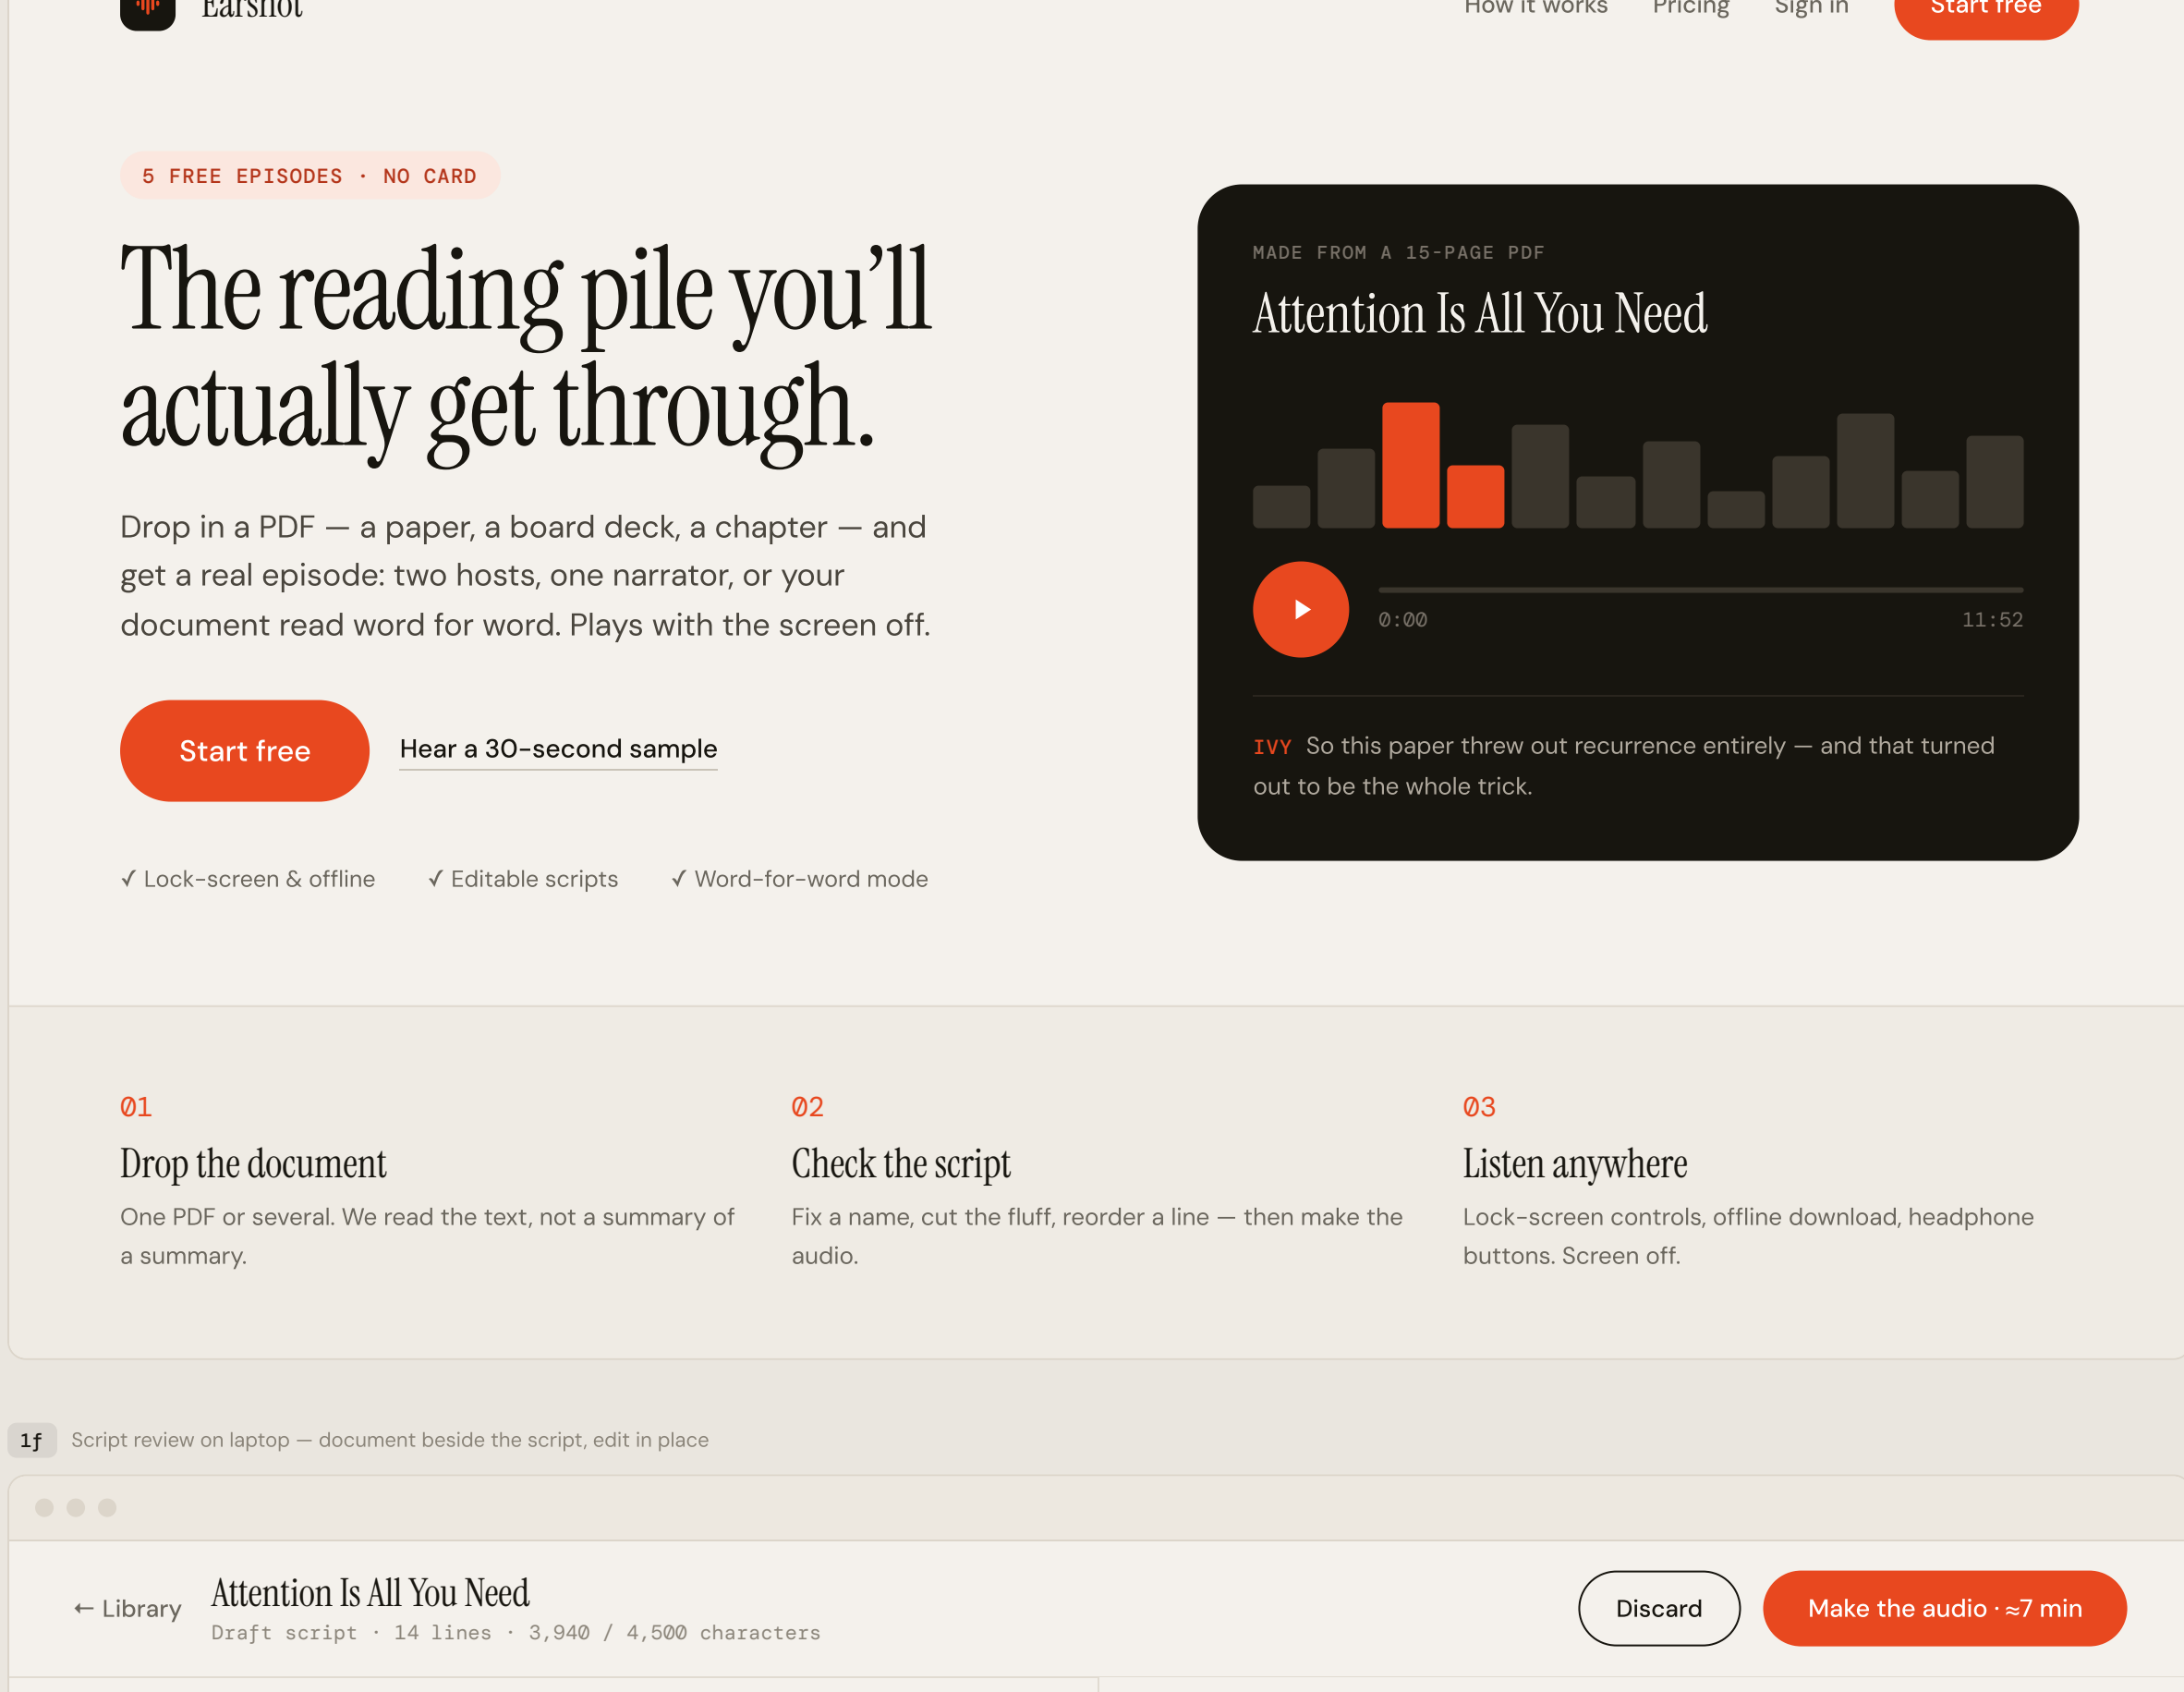

1c Laptop home, option A — library-first, two columns, 1140px of real estate

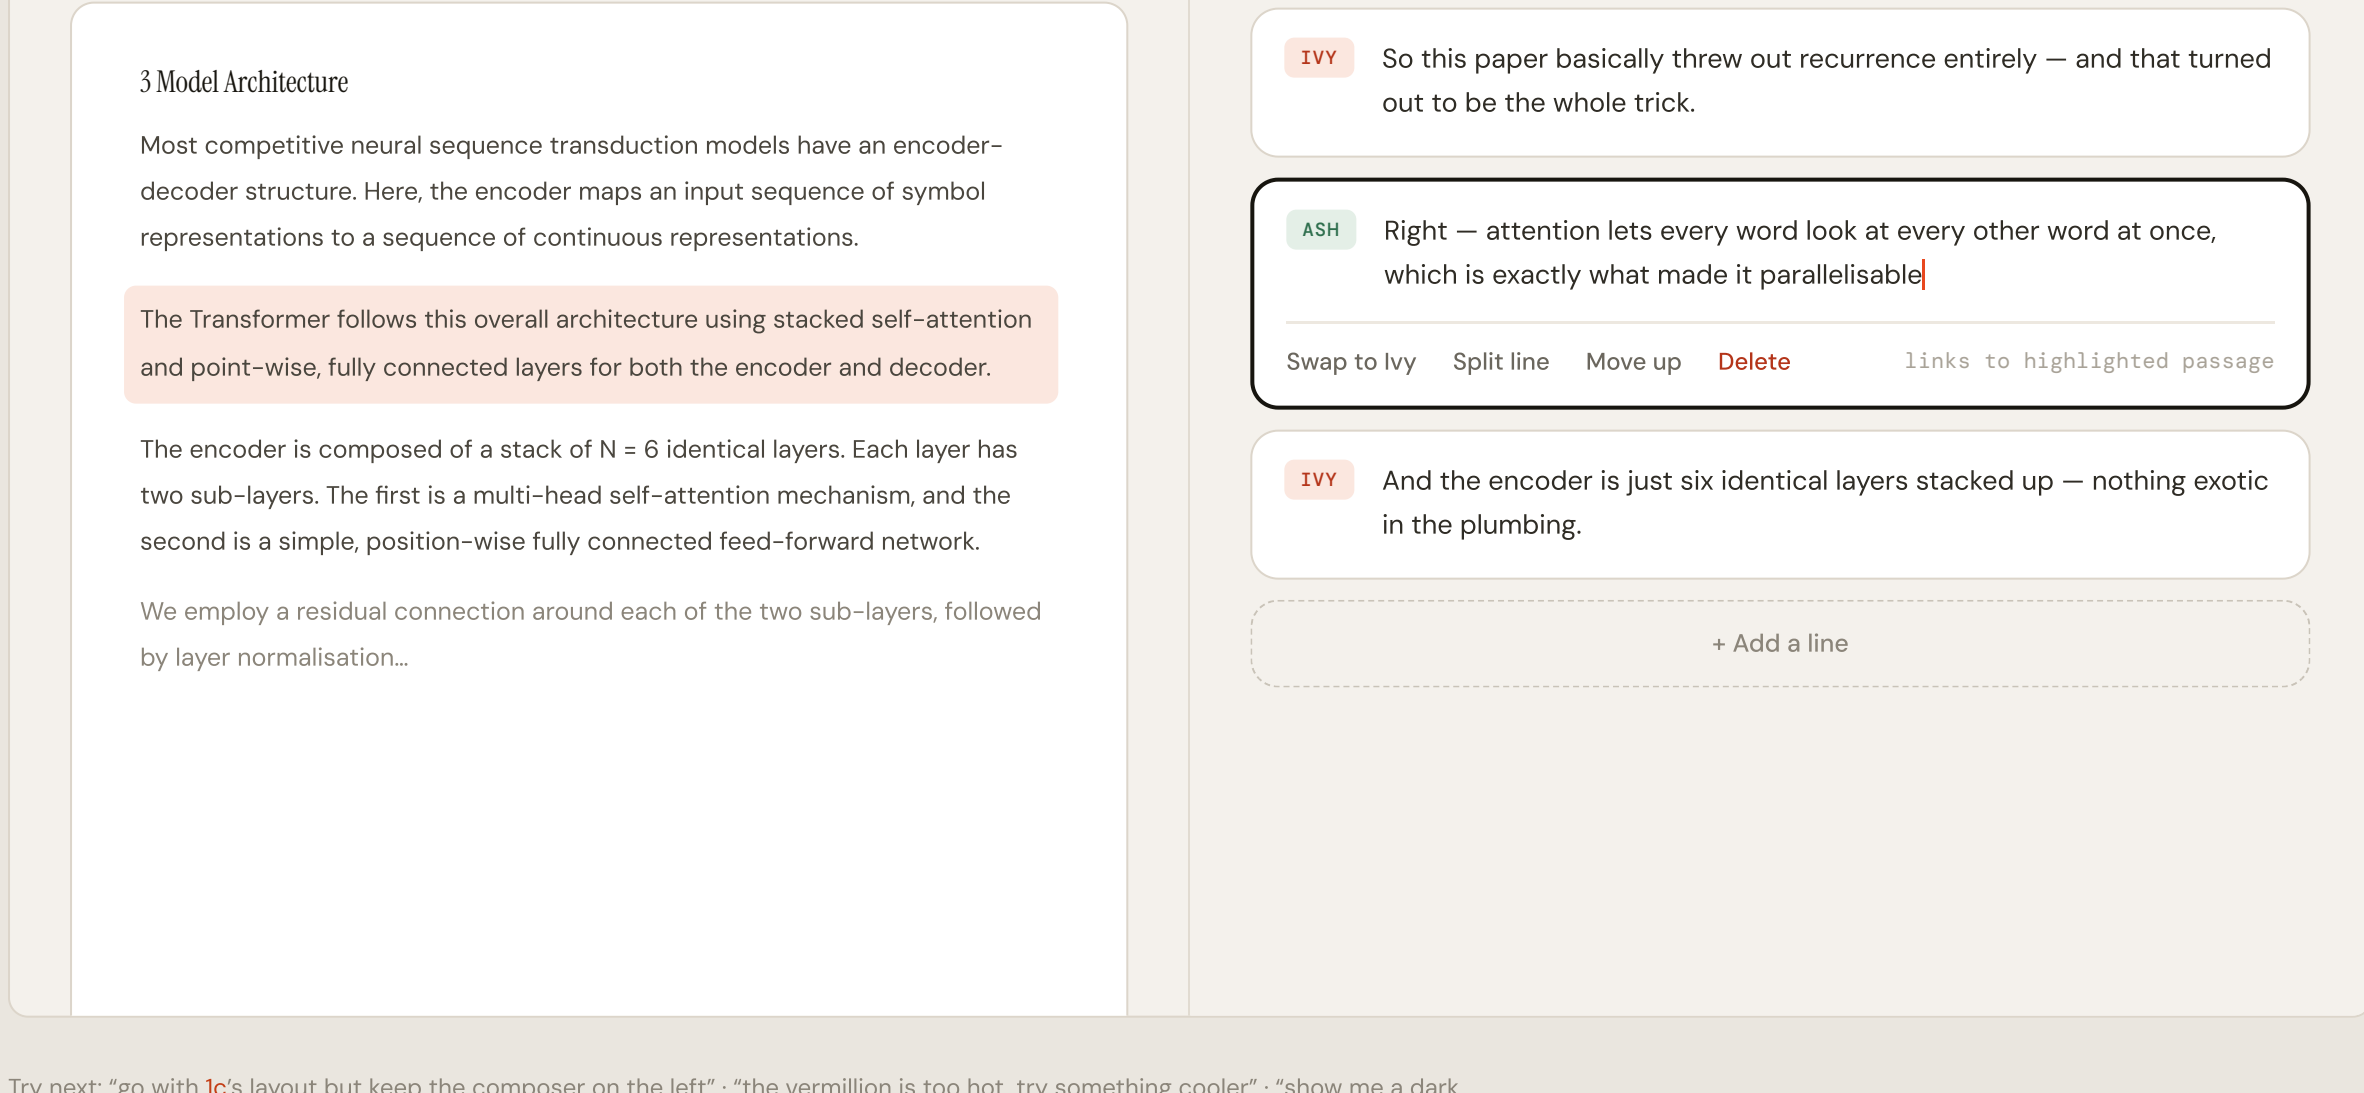

1d Laptop home, option B — one column, creation as a full-width dropzone, docked player

1e Landing page — laptop

1f Script review on laptop — document beside the script, edit in place

Try next: "go with 1c's layout but keep the composer on the left" - "the vermilion is too hot, try something cooler" - "show me a dark version of 1c" - "keep the name PDF Podcast"
